# Data Collaboration

Access data & share insights with the AutoQL Microsoft Teams App

AutoQL lets business users explore their data warehouse(s) and gain detailed information by asking questions and getting answers instantly. Departments can share visualizations, collaborate with their peers, and make data-driven decisions with confidence -- all from Microsoft Teams.
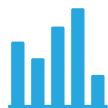

Features

Streamline the modern workplace with on-demand data access. Users can work faster and make data-driven decisions in real-time, without leaving Teams!

Ask questions and get data responses in seconds

Visualize data with different graphs and charts

Drilldown with a click and discover underlying details

Share responses in a channel to collaborate with peers

+ CHATA

Self-Service Data Access for Data-Driven
Decision Making

Empower users with direct access to your data warehouse

1 Take the burden off the technical teams by equipping users with self-service data access.

2 Streamline workflows and enable seamless collaboration for faster data-driven decisions.

3 Eliminate technical onboarding and expedite adoption with an easy-to-use Teams app.
